

Inventory Health Checklist for Pharmacies

Use this quick checklist to assess how well your pharmacy inventory is being managed.

Each **'YES'** means you're on the right track.

- Are your physical stock records aligned with your software?
- Are expired or near-expiry items removed or clearly flagged?
- Do you regularly review and clear slow-moving products?
- Are your shelves and storage areas clearly categorized and organized?
- Can your team generate and interpret key inventory KPIs (like turnover rate or expiry index)?

If you answered **'NO'** to two or more, your inventory may be exposing your business to losses and inefficiencies.

Each **'NO'** could lead to:

- Lost revenue due to expired or unsold stock
- Inaccurate reordering and stockouts
- Poor decisions based on unreliable reports
- Wasted time locating or managing products

Fixing these issues helps protect your profit and improve daily operations.

Let's help you close the gaps — from audits to training, system reviews, and ongoing support.
